

# EESSI PROJECT

# ESSI IS NOT EASY

( Erik Engström)

## WHY ?

### Two points of view :

- Commission point of view
- Member States point of view

## Commission point of view :

- **Member States don't know that they want !!!**
  - WEBIC, ICD3, ICD5, Reflection period ...
- **It's difficult to manage a project in this conditions :**
  - Problems with contractor

## Member State point of view :

- New regulations
- Organizational problems
- Technical problems
- Security problems
- ....

## **New regulations for Clerk :**

- Obligation to define new procedures**
- Obligation to train our clerks**

## **The complex organizational structure of the social security system :**

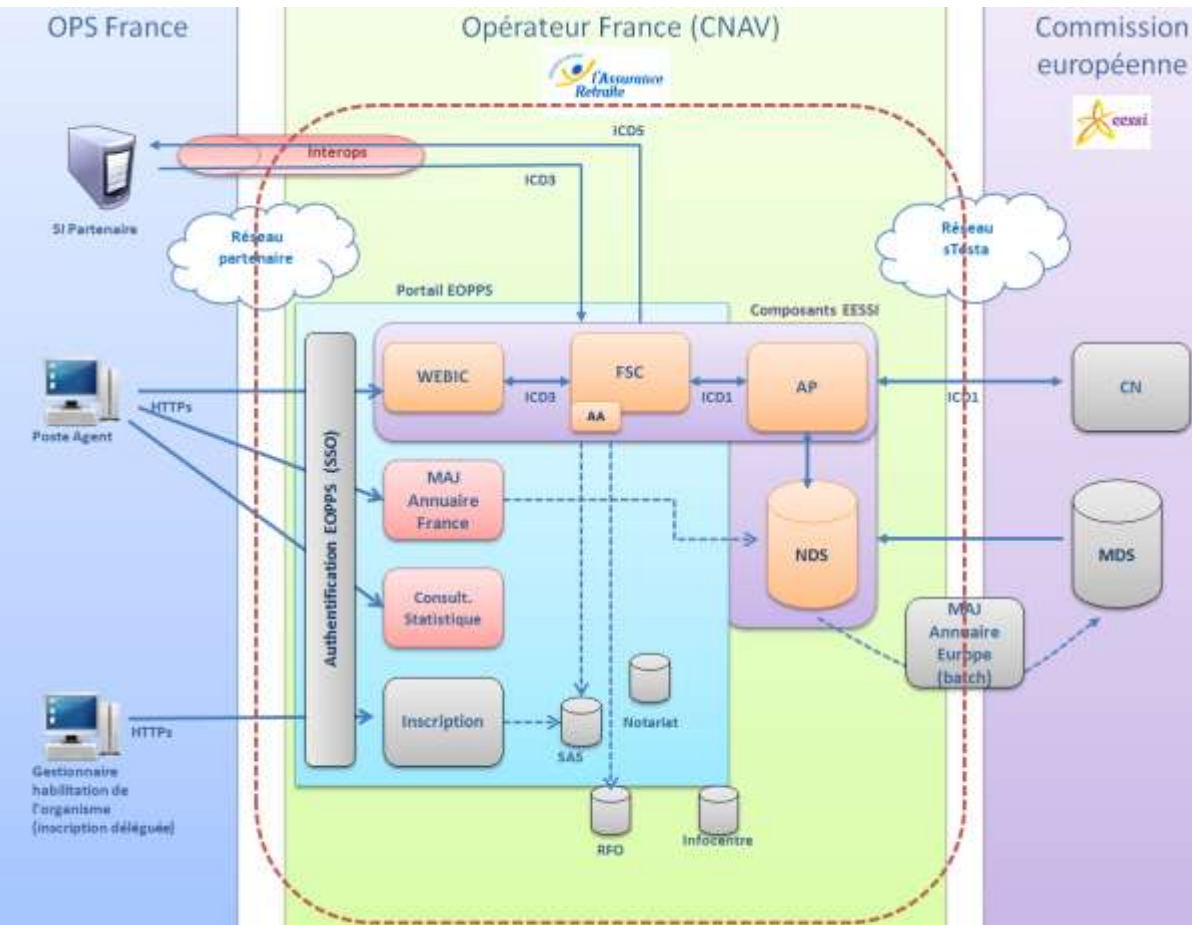

- Difficult to identify the right organism**
- Master directory is not usable easily**
- We must simplify our organization when it is possible**

## Technically :

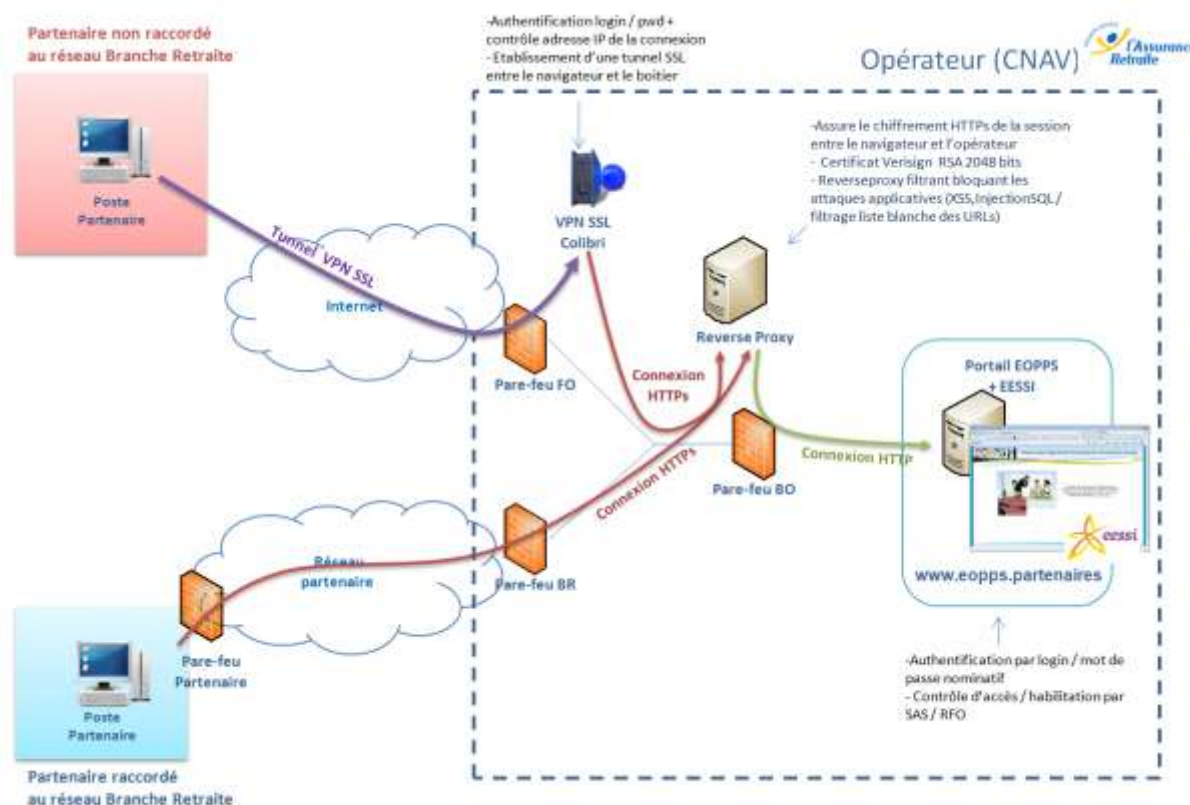

- **It's necessary to make some modifications :**
  - To increase performances
  - To facilitate the routing
  - To facilitate the search on a particular person on SEDs
- **But it's not possible to continue to define new requirements**

**French organization:**

## French organization:

## **To conclude**

**If I want see EESSI into production before I retired, it is necessary to correct technical problems identified and arrest to express new requirements**

**We all know that the first version of EESSI is not perfect, but using it and working on a future release because we risk our clerks demotivating**
